ADI LIMITED. 1989. Industrial mineral production and consumption in New Brunswick, Volume 6 - Directory of consumers of industrial minerals in eastern Canada and the northeastern United States. New Brunswick Department of Natural Resources and Energy, Minerals and Energy Division, Open File Report 89-41, 178 p.

PREFACE

From 1985-1989, the Province of New Brunswick, in conjunction with the Government of Canada, has initiated a number of mineral commodity studies through the Economic Development Program established under a Federal-Provincial Mineral Development Agreement. An important part of this agreement has involved studies designed in part to provide important marketing information on selected industrial minerals. These market-related projects have tended to concentrate on potential market growth areas primarily in North America, and particularly in areas where a New Brunswick producer could be competitive.

Whether it be building stone from Shediac, gypsum from Hillsborough or limestone from Saint John, industrial minerals have historically been important contributors to the economic growth and prosperity of New Brunswick. Today, industrial minerals are still important. Potash mining generates millions of dollars of salaries and business in the Sussex area, while the processing of phosphate rock with by-product sulphuric acid from a nearby lead smelter is a major industry in the Belledune-Bathurst region.

Preliminary figures for the value of industrial mineral production in New Brunswick was about $251 000 000 (Cdn) in 1988 compared to $197 000 000 in 1987. This represents an increase of twenty-two (22) percent. In 1988, industrial mineral production accounted for 31 percent of the total value of Provincial mineral production.

The manufacturing sector of the Province and surrounding areas consume substantial quantities of industrial minerals and their derived chemicals. Changing technology is making new demands on both the quality and quantities of industrial minerals consumed in the region. The requirement to document industrial mineral production in the Province as well as the consumption of these mineral commodities both, in the Province and adjacent areas, is becoming an increasingly important facet of responsible resource management.

Keenly aware of the importance of industrial minerals, the New Brunswick Department of Natural Resources and Energy has sponsored a review of industrial mineral supply and demand for New Brunswick (exclusive of granular and bedrock aggregate). The review was conducted under contract by ADI Limited and Three-D Geoconsultants Limited.

The purpose of the study is to provide as comprehensive and contemporary information as possible concerning the state of the industrial minerals industry in New Brunswick from both a producer's and consumer's point of view. Towards the achievement

of this goal, an assessment of the current supply/demand situation in the Province and adjacent reasonably accessible market areas was undertaken in an attempt to identify potential opportunities for market expansion and future development of indigenous industrial mineral resources. Another study objective is to indicate to various manufacturing industries where sources of various industrial mineral products are located in New Brunswick. Such an approach may be of some value in attracting new manufacturing industries to the Province. In addition, an attempt has been made to identify and document local market opportunties by showing producers where, in what quantities and under what circumstances industrial minerals and industrial mineral-based chemicals are being utilized within the Province and immediate surrounding areas.

Although this study focused primarily on the supply and demand of industrial minerals and industrial mineral-based chemicals produced and consumed in New Brunswick, the demand for similar products in market areas considered reasonably accessible to a local producer were also evaluated to some extent.

The results of the review were issued in the spring of 1989 and consist of a six volume report. Volume 1, 2 and 3 detail the history of specific industrial mineral production and consumption in New Brunswick and current demand within a market place easily accessible from the Province. Volume 4 provides demand projections for key industrial minerals, and describes the possible effects on future demand from environmental, technical, and other developments. Finally, Volumes 5 and 6 include a directory of New Brunswick's industrial mineral producers and consumers of industrial minerals within economic shipping distance of New Brunswick.

Component volumes of this extensive study are listed below:

Volume	Title	Open File Report
1.	Industrial Minerals Used Primarily in the Fertilizer Industry	89-36
2.	Industrial Minerals Used Primarily in the Construction Industry	89-37
3.	Industrial Minerals Used Primarily in the Chemical and Pulp and Paper Industries	89-38
4.	The Future of Industrial Minerals: General Trends in Consumption and Transportation	89-39
5.	Directory of New Brunswick Industrial Mineral Producers	89-40

Volume	Title	Open File Report
6.	Directory of Consumers of Industrial Minerals in Eastern Canada and the Northeastern United States	89-41

This volume presents a directory of industrial mineral consumers situated in a market area reasonably accessible to a New Brunswick producer.

VOLUME 6

DIRECTORY OF CONSUMERS OF INDUSTRIAL MINERALS IN EASTERN CANADA AND THE NORTHEASTERN UNITED STATES

6.0 INTRODUCTION

The following Industrial Mineral Consumer Directories have been prepared using a tiered approach.

Tier A Consumers represent consumers which could now be serviced economically from New Brunswick. Directory entries include information such as the name, mailing address, telephone number, location, ownership, contact person, products, and size of a company, where possible.

Tier B Consumers represent consumers which could be serviced economically from New Brunswick if the delivered costs were drastically reduced. Directory entries include information such as the name, location, and size of a company, where possible.

Tier C Consumers represent an estimate of the number of consumers within a more extensive market area (eastern Canada and the northeastern United States).

6.1 CONSUMERS OF CEMENT AND CEMENT PRODUCTS

TIER "A" CONSUMERS

CANADIAN CONSUMERS OF CEMENT AND CEMENT PRODUCTS

Mailing Address:	A&P Concrete Products Ltd. R.R. #1 Sainte-Marie-de-Kent Kent County, N.B.
Telephone:	506-955-3330
